Our offers

Detection of many genetic modification including knock-out, knock-in, structural variants, transgenic or any other genetically modified rodent model,

Assay design and validation for new genotyping strategies or optimization of pre-existing strategies,

Genotyping of **different species** (mouse, rat, zebrafish...), from **several tissues origins** with invasive (tails biopsies, ear tags, embryonic yolk sac...) or non_invasive procedure (hair, feces, buccal swab...),

Six methods available in routine: Universal or specific PCR and/or qPCR reactions, Target gene sequencing, Quantification with digital PCR reaction,

Delivery of **interpreted genotyping results** (not only raw data) in less than 5 open days,

Detailed genotyping protocol available on request,

Blastocyst or sperm genotyping (3Rs) for **your mouse cryopreserved line**.
